

◆ Full line of Sanitary Pipeline Gaskets

## Seat and "O" Rings

### Teflon

- Most commonly used seat material for food application. Has extensive chemical and temperature resistance.
- Not suitable for great temperature fluctuations as teflon tends to cold-flow and does not return to its original shape.
- **Useful temperature range** - -30°F to 400°F

### Buna N

- Nitrile compound provides an elastic seat that makes for leak-free, easy handling of valve. Least expensive elastomer.
- Good chemical resistance, excellent for use with petroleum solvents, gasoline, alcohol, etc...
- **Recommended lubricant** - SILICONE
- **Useful temperature range** - -40°F to 225°F

### Silicone

- Very good seat material, very elastic self-lubricating--provides a tight easy seal, reducing torque needed to close the valves.
- Sensitive to certain chemicals, do not use with solvents, petroleum products, etc. (check with us for non-food usage).
- **Useful temperature range** - -85°F to 450°F

### EPDM

- Good for steam and hot water to 350°F.
- Good resistance to mild acids, dilute alkalis, silicone oils and greases, ketones and alcohol.
- Avoid use for petroleum oils or diester base lubricants.
- **Useful temperature range** - -65°F to 300°F

### Viton

- Both extreme temperature and good chemical resistance.
- Useful at high temperature when buna or EPDM is not suitable.
- **Recommended lubricant** - SILICONE
- **Useful temperature range** - -31°F to 400°F

## Gaskets
